## The Mecoskop for the Legislative Period 2023-2028

**A benchmark to monitor how the government delivers on its promises made in the coalition agreement.**

One year after the new government took office, the Mouvement Ecologique introduced and presented the Mecoskop instrument.

The purpose of this is to monitor whether the government is implementing the goals it set itself in the coalition agreement in the area of sustainable development.

## THE MECOSKOP – KEEPING A CRITICAL BUT CONSTRUCTIVE EYE ON THE GOVERNMENT

Is the government actually implementing what it promised in the government programme in the area of sustainable development? The 'Mecoskop' is designed to monitor and review this. It allows for a clear demonstration of the extent to which the government is living up to its own claims and the promises made to citizens.

But the mecoscope is also intended to encourage ministries to feel even more challenged to implement the relevant provisions of the coalition agreement.

The Mouvement Ecologique has retained 77 key promises in the area of 'sustainable development' from the government programme. Only statements in areas that the Mouvement Ecologique is (actively) working on and accordingly also pursuing, or which are particularly welcome from a sustainability perspective, have been included.

### HOW DOES THE MECOSKOP WORK?

All the pledges are evaluated as objectively as possible. Four phases are distinguished to visualise their implementation in practice (see figure). In addition, photos of the government officials show which ministry is responsible for their implementation based on its competencies.

As far as possible, the quality of implementation from the point of view of the Mouvement Ecologique is also assessed. This is because it is quite possible that a promise has been addressed, but that its implementation is highly problematic from the point of view of the Mouvement Ecologique.

It is continuously updated, at least every six months, to reflect the current state of implementation.

An analysis of the first year of the government's work shows that, of the 77 government promises listed, 55 have not yet been addressed, according to the information available to the Mouvement Ecologique.

The Mouvement Ecologique hopes that the Mecoskop will help to increase the government's transparency and accountability with regard to its sustainability goals.

According to the information available, implementation of the measure has not yet been initiated.

Implementation of the measure is, as far as is known, in preparation / has been initiated.

Implementation is being worked out in detail.

Implementation has been completed

The Mecoscope is available in a German, French and English version: [www.mecoskop.lu](http://www.mecoskop.lu).
